

Table of Contents

Poster Session

1 System Aspects

- 1.1 Comparison of Dynamic Simulations and Steady-State Calculations of Fault Currents in Distribution Grids with High DG Penetration 14**
P. Erlinghagen, T. Wippenbeck, F. Glinka, A. Schnettler (RWTH Aachen University, Germany)
- 1.2 Decentralized, integrated automation system for medium- and low-voltage grids 20**
F. Dorsemagen, K. Korotkiewicz, C. Oerter, M. Zdrallek, P. Birkner (University of Wuppertal, Germany); W. Friedrich (Bilfinger Mauell GmbH, Velbert, Germany); U. Dietzler (Energieversorgung Leverkusen GmbH & Co. KG, Leverkusen, Germany); N. Neusel-Lange, M. Stiegler (SAG GmbH, Dortmund, Germany)
- 1.3 BorWin1 – First Experiences with harmonic interactions in converter dominated grids 27**
C. Buchhagen, C. Rauscher, A. Menze, J. Jung, (TenneT GmbH & Co. KG, Germany)
- 1.4 Cost Optimized Planning and Operation of Rural Distribution Grids 34**
P. Steffens, S. Harnisch, H. Thies, M. Zdrallek (University of Wuppertal, Germany); L. Martin, C. Böse, (Siemens AG, Erlangen, Germany); T. Noske, J. Hache (Mitteldeutsche Netzgesellschaft Strom mbH, Halle, Germany)
- 1.5 Vertical Reactive Power Flexibility based on Different Reactive Power Characteristics for Distributed Energy Resources 42**
I. Talavera (Technical University of Darmstadt, Germany); S. Stepanescu (Netze BW, Stuttgart, Germany); F. Bennewitz, J. Hanson (Technical University of Darmstadt, Germany); R. Huber, F. Oechsle (Netze BW GmbH, Stuttgart, Germany); H. Abele (Transnet BW GmbH, Stuttgart, Germany)
- 1.6 Optimized scheduling of μ CHP plants to reduce peak load of low voltage networks 49**
J. Buhr, J. Werner, P. Schegner (Technical University Dresden, Germany)
- 1.7 Evaluation of Reliability in Distribution Grids Depending on Information and Communication Technology 56**
D. Schacht, H. Vennegeerts, S. Krahl, A. Moser (FGH e. V., Aachen, Germany)
- 1.8 Architecture and simulation of a virtual power plant in Hamburg 64**
P. Lorenzen, G. Duckstein, P. Vuthi, H. Schäfers (Hamburg University of Applied Sciences, Hamburg, Germany)
- 1.9 Challenges for Conventional Power Plants at High Shares of Variable Renewable Energy 72**
P.-P. Schierhorn, T. Brown, E. Tröster (Energynautics GmbH, Darmstadt, Germany)

1.10 A Matlab GUI for the Generation of Distribution Grid Models	79
E. Schweitzer, K. Togawa, T. Schlösser, A. Monti (RWTH Aachen University, Germany)	
1.11 Optimal placement and sizing of battery storage to increase the PV hosting capacity of low voltage grids	85
V. Poullos (EWZ, Zurich, Switzerland); E. Vrettos (ETH Zurich, Switzerland); F. Kienzle, E. Kaffe, H. Luternauer (EWZ, Zurich, Switzerland); G. Andersson (ETH Zurich, Switzerland)	
1.12 A DER Registry System as an Infrastructural Component for future Smart Grid Applications	93
T. Dethlefs, T. Preisler, W. Renz (Hamburg University of Applied Sciences, Hamburg, Germany)	
1.13 Planning the optimal number and placement of embedded VSC-HVDC links in the German AC transmission grid	100
W. Wellßow, H. Pluntke (Technical University of Kaiserslautern, Germany)	
1.14 A Contribution to Thorough Comprehension of POD Provided by FACTS Devices .	107
T. Graber, S. Höhn, M. Luther (Friedrich-Alexander-University Erlangen-Nuremberg, Germany)	
1.15 Fast redefinition of HVDC converter power set points based on local HVAC and HVDC disturbance identification and a priori HVAC/HVDC optimization	114
F. Sass, A.-K. Marten, D. Westermann (Technical University of Ilmenau, Germany)	
1.16 Impact of Distributed Battery Energy Storage Systems on Low Voltage Grids with High Amount of Photovoltaics	121
K. Veerashekar (Friedrich-Alexander-University Erlangen-Nuremberg, Germany); P. La Seta (Siemens AG, Erlangen, Germany); M. Luther (Friedrich-Alexander-University Erlangen-Nuremberg, Germany)	
1.17 A modelling approach for dynamic short-circuit analysis of the German power system considering all voltage levels	129
S. Altschäffl, R. Witzmann (Technical University Munich, Germany)	
1.18 Influence of selected flexibility options on the operation of fossil-fueled power plants	137
M. Salzinger, S. Remppis, F. Gutekunst, G. Scheffknecht (University of Stuttgart, Germany)	
1.19 Genetic Algorithm for Optimal Meter Placement and Selection in Distribution Grid State Estimation	144
M. Cramer, P. Goergens F. Potratz, A. Schnettler (RWTH Aachen University, Germany)	
1.20 Electricity Storage Systems in Medium- and Low-Voltage Networks	151
A. Becker (Clausthal University of Technology & Energie-Forschungszentrum Niedersachsen – EFZN, Germany); H. Loges (Technical University of Braunschweig, Germany); S. Kippelt (Technical University of Dortmund, Germany); A. Gitis, G. Merei, D. Echternacht (RWTH Aachen University, Germany); M. Kleimaier (ETG, Germany); M. Leuthold (RWTH Aachen University, Germany); H. C. Hesse (Technical University of Munich, Germany); H.-P. Beck (Technical University of Clausthal, Germany); B. Engel (Technical University of Braunschweig, Germany); A. Jossen (Technical University of Munich, Germany); A. Moser (RWTH Aachen University, Germany); C. Rehtanz (University of Dortmund, Germany); D. Sauer (RWTH Aachen University, Germany); Rolf Witzmann (Technical University of Munich, Germany)	

1.21	Bottom-Up Simulation of Suburban Power Grids	159
	S. Kochanneck, C. Hirsch, I. Mauser, H. Schmeck, M. Schröder (Karlsruhe Institute of Technology, Germany)	
1.22	Optimization of Hybrid Appliances in Future Households	165
	I. Mauser, H. Schmeck (Karlsruhe Institute of Technology, Germany); U. Schaumann (E.G.O. Elektro-Gerätebau GmbH, Oberderdingen, Germany)	
1.23	Modular Probabilistic Approach for Modelling Distribution Grids and its Application	171
	M. Jäkel, P. Schäfer, D. Schacht, S. Patzack, A. Moser (FGH e. V., Aachen, Germany)	
1.24	Methods for scaling a physical based CHP model for HIL simulation of smart combined grid systems	178
	M. Griese, T. Pawlik, T. Schulte, J. Maas (Ostwestfalen-Lippe University of Applied Sciences, Lemgo, Germany)	
1.25	Transformer suitability for a successful load shedding in the TSO control area	186
	A. Richter, I. Hauer, Z. Styczynski, M. Wolter (Otto-von-Guericke University, Magdeburg, Germany)	
1.26	Potential of the AÜW Network Area to Provide Reactive Power to Transmission Network Level	192
	T. Sowa, P. Goergens, A. Schnettler (RWTH Aachen University, Germany); R. Köberle (AllgäuNetz GmbH, Kempten, Germany); M. Metzger (Siemens AG, Munich, Germany)	
1.27	Recursive analysis and forecast of superimposed generation and load time series ..	198
	A. Kummerow, S. Klaiber, S. Nicolai, P. Bretschneider (Advanced System Technology (AST) Branch of Fraunhofer IOSB, Germany)	
1.28	Predicting the Balance of European Control Areas	204
	O. Scheufeld, M. Schoeneberger, S. Krahl, A. Moser (FGH e. V., Aachen, Germany); P. Gilsdorf (Amprion GmbH, Brauweiler, Germany)	
1.29	Robust Switching States for an Application in Transmission System Operation	211
	A. Moormann, S. Krahl, A. Moser (FGH e. V., Aachen, Germany); G. Mika (Austrian Power Grid, Vienna, Austria)	
1.30	Extending the SGAM for Electric Vehicles	219
	M. Uslar, M. Gottschalk (OFFIS, Oldenburg, Germany)	
1.31	Increasing the hosting capacity of RES in distribution grids by active power control	227
	P. Larscheid, M. Maercks, S. Dierkes, A. Moser (RWTH Aachen University, Germany); S. Patzack, H. Vennegeerts (FGH e. V., Aachen, Germany); J. Rolink (EWE AG, Oldenburg, Germany); E. Wieben (EWE NETZ GmbH, Oldenburg, Germany);	
1.32	Potential of Methane Usage as long-term Energy Storage and Hybrid Systems	234
	J.-H. Psola, S. Estelmann, M. Henke (Technical University of Braunschweig, Germany)	
1.33	Controlled Reactive Power Provision at the Interface of Medium- and High Voltage Level: First Laboratory Experiences for a Bayernwerk Distribution Grid using Real-Time-Hardware-in-the-Loop-Simulation	240
	H. Wang, T. Stetz, F. Marten, M. Kraiczy (Fraunhofer IWES, Kassel, Germany); S. Schmidt, C. Bock (Bayernwerk AG, Regensburg, Germany); M. Braun (University of Kassel, Germany)	

1.34	Analysis of Strategies limiting the Reactive Power Flow between Power Distribution and Transmission Networks	248
	P. Schäfer, H. Vennegeerts, S. Krahl, A. Moser (FGH e. V., Aachen, Germany)	
1.35	Method for the determination of a flexible capacity range by electric vehicles for ensuring system security	255
	S. Schlegel, D. Westermann (Technical University of Ilmenau, Germany)	
1.36	Planning and operation of rural HV distribution grids of the future	261
	L. Martin, C. Böse, B. Gemsjäger (Siemens AG, Erlangen, Germany); S. Harnisch, P. Steffens, H. Thies, M. Zdrallek (University of Wuppertal, Germany); J. Hache, T. Noske (Mitteldeutsche Netzgesellschaft mbH, Halle, Germany)	
1.37	The Energy System Development Plan (ESDP)	267
	S. Raths, S. Koopmann, C. Müller, A.-K. Meinerzhagen, T. Falke, M. Cramer, T. Kulms, D. Beulertz, H. Barrios, A. Schnettler (RWTH Aachen University, Germany); M. Tackenberg, F. Steinke, P. Wolfrum, M. Metzger, B. Schlageter, W. Kusian, A. Schmidt (Siemens AG, Erlangen/Munich, Germany)	
1.38	Parameterization of Inverter-Based Distributed Energy Resources regarding typical Grid Protection Schemes	275
	S. Laudahn, B. Engel (Technical University of Braunschweig, Germany); T. Bülo, V. Sakschewski, G. Bettenwort, H. Knopf, J. Jahn (SMA Solar Technology AG, Niestetal, Germany)	
1.39	Modelling of the vehicle to grid storage potential considering uncertainties in user behavior based on fleet test data	282
	M. Kammerlocher (Volkswagen Group, Wolfsburg & Technical University of Braunschweig, Germany); K. Baumbusch, (LichtBlick SE, Hamburg, Germany); R. Brodale (Technical University of Braunschweig, Germany); H. Haupt (Volkswagen Group, Wolfsburg, Germany); M. Kurrat (Technical University of Braunschweig, Germany)	
1.40	Modelling, Planning, Design and Evaluation of DC-Distribution Grids	289
	D. Echternacht, H. Stagge, J. Priebe, P. Wiernes, K. Jagielski, A-K. Petri, S. Drießen, B. Trevisan, C. Digmayer, C. Oberst, B. Keysselitz, M. Kremer, S. Sieber, S. Krapp, E-M. Jakobs, M. Frenz, F. Lohrberg, K. Wachten, A. Moser, RWTH Aachen University, Germany	
1.41	Development of technical requirements for DG and corresponding conformity-check-procedures in the course of the German “Energiewende”	296
	M. Meuser (FGH Zertifizierungsgesellschaft mbH, Mannheim, Germany); J. Langstädtler (FGH GmbH, Mannheim, Germany), H. Kühn (TenneT TSO GmbH, Bayreuth, Germany); F. Kalverkamp (FGH GmbH, Mannheim, Germany)	
1.42	Demand-appropriate utilisation of free reactive power potentials from Renewable Energy plants in the framework of system management of the 110 kV distribution grids	302
	M. Malsch, S. Prinz (P&M Power Consulting GmbH, Erfurt, Germany)	
1.43	High-power inductive charging in weak grid branches	310
	J. Wussow, B. Engel (Technical University of Braunschweig, Germany)	
1.44	Time constrained optimal power flow calculations on the German power grid	316
	N. Meyer-Hübner, M. Suriyah, T. Leibfried, V. Slednev, V. Bertsch, W. Fichtner (Karlsruhe Institute of Technology – KIT, Germany); P. Gerstner, M. Schick, V. Heuveline (Heidelberg University, Germany)	

1.45 DC Fault Currents for FB-MMC HVDC with Bipolar Configuration	323
S. Beckler, J. Lehner, A. Arnold, A. Kaptue Kamga (TransnetBW GmbH, Stuttgart, Germany); K. Frey, K. Rudion (Universität Stuttgart, Germany)	
1.46 Evaluation of Self-sufficiency by Variation of Future Energy Prosumers in Households	329
D. Hölker, D. Brettschneider, D. Pott, M. Reckzügel, R. Tönjes (University of Applied Sciences Osnabrück, Germany)	
1.47 “Energiewende” and flexible gas fired power generation	335
U. Lenk, I. Pyc, (Siemens AG, Erlangen, Germany); F. Steinke (Siemens Corporate Technologies, Munich, Germany)	
1.48 Analysis and comparison of national and international validation methods to assess the quality of DG simulation models	341
M. Meuser, M. Brennecke, (FGH GmbH, Mannheim/Aachen, Germany)	
1.49 Simulation of the life-time consumption from oil-immersed transformers with consideration of the further development of decentralize PV feed-in	348
D. Stakic, F. Ebe, H. Ruf, (Ulm University of Applied Science, Germany); F. Meier (Stadtwerke Ulm/Neu-Ulm Netze GmbH, Ulm, Germany); G. Heilscher (Ulm University of Applied Science, Germany)	
1.50 Control strategies of phase-shifting transformers in long-term network development	356
R. Bauer, J. Weidner (50Hertz Transmission GmbH, Berlin, Germany); S. Salehinajafabadi (Cottbus, Germany)	
1.51 Ancillary services provided from DSO networks – how to handle volatile dispersed generation combined with highly loaded network equipment	363
W. Becker, R. Halbauer, (Mitteldeutsche Netzgesellschaft Strom mbH, Halle, Germany); K. Pfeiffer (Brandenburg University of Technology Cottbus-Senftenberg, Germany)	
 2 Technologies & Components	
2.1 Expanding high voltage network capacity using a weather condition based indirect monitoring system	369
U. van Dyk, L. Jendernalik, O. Herz, (Westnetz GmbH, Dortmund, Germany)	
2.2 A Novel Cost-Effective Circuit Topology for Reactive Power Compensation in Electrical Grids	374
A. Gavrilov (Maschinenfabrik Reinhausen GmbH, Regensburg, Germany)	
2.3 Control of Active Front-End inverter During Asymmetrical Grid Faults	379
T. Völker (University of Applied Sciences Bremen, Germany)	
2.4 Improving Power Quality by a 10/20 kV / 0.4 kV Voltage Regulated Distribution Transformer using Semiconductor Switching Devices	385
J. Fröhner, G. Schulz, J. Claus, M. Lemkens (ct.e Controltechnology Engineering GmbH, Herne, Germany)	
2.5 Observer-Based Online Parameter Estimation of Doubly Fed Induction Generators Based on a Gradient Descent Method	392
J. Koupenny, M. Siebrecht, S. Lücke, A. Mertens (Leibniz University of Hannover, Germany)	

2.6	Increasing the Limits of Grid Extension for Renewable Integration through Decentralized Compensation	400
	G. Banerjee, W. Heckmann (Fraunhofer IWES, Kassel, Germany)	
2.7	Parameterization of Reactive Power Characteristics for Distributed Generators: Field Experience and Recommendations	406
	M. Kraiczy (Fraunhofer IWES, Kassel, Germany); G. Lammert (University of Kassel, Germany); T. Stetz (Fraunhofer IWES, Kassel, Germany); S. Gehler (University of Kassel, Germany); G. Arnold (Fraunhofer IWES, Kassel, Germany); M. Braun (Fraunhofer IWES & University of Kassel, Germany); S. Schmidt (Bayernwerk AG, Regensburg, Germany); H. Homeyer (Avacon AG, Salzgitter, Germany); U. Zickler, F. Sommerwerk (TEN Thüringer Energienetze GmbH, Erfurt, Germany); C. Elbs (Vorarlberger Energienetze GmbH, Bregenz, Austria)	
2.8	Verification of a state of the art all-vanadium flow battery model with the “Compact Storage” by SCHMID Energy Systems GmbH	414
	S. König, A. Wöber, M. Suriyah, T. Leibfried (Karlsruhe Institute of Technology – KIT, Karlsruhe, Germany); R. Wößner, K. Weisser, M. Frank (SCHMID Energy Systems GmbH, Freudenstadt, Germany)	
2.9	Probabilistic approach for the determination of connection power using smart meter data for urban households with decentralized generation and storage units ...	422
	T. Wieland, E. Schmutzger, L. Fickert (Technical University of Graz, Austria); S. Eberhart (Energie Graz GmbH & Co KG, Graz, Austria)	
2.10	An advantageous grid integration method and control strategy for renewable energy sources and energy storage systems	428
	S. Henninger (University of Erlangen-Nuremberg, Germany); H. Rubenbauer (Siemens AG, Erlangen, Germany); J. Jäger (University of Erlangen-Nuremberg, Germany)	
2.11	Evaluation of the entire battery life cycle with respect to lithium ion batteries	435
	U. Westerhoff, K. Kurbach, D. Unger, H. Loges, D. Hauck (Technical University of Braunschweig, Germany); F. Lienesch (Physikalisch-Technische Bundesanstalt, Braunschweig, Germany); M. Kurrat, B. Engel (Technical University of Braunschweig, Germany)	
2.12	Scalable Multi-level Energy Management for Residential Buildings	442
	S. Diekmann, F. Funck, B. Engel (Technical University of Braunschweig, Germany)	
2.13	Extensible distribution grid automation using IEC 61131 in simulation and operation	449
	C. Hübner (ifak e.V. Magdeburg, Germany); A. Fedorov (Donetsk National Technical University, Ukraine); C. Huth (Netze Magdeburg GmbH, Germany); C. Diedrich (Otto-von-Guericke-University of Magdeburg, Germany)	
2.14	Automated distribution grid planning considering Smart Grid and conventional grid reinforcement technologies	456
	W. Biener, K. Dallmer-Zerbe, B. Krug (Fraunhofer ISE, Germany); G. Gust (University of Freiburg, Germany); B. Wille-Hausmann (Fraunhofer ISE, Germany)	
2.15	Efficiency of Advanced Smart Grid Technologies applied in Ufa’s Distribution Network in Russia	462
	H. Müller (Siemens AG, Erlangen, Germany); A. Yu. Makarov (Bashkirian Power Grid Company, Ufa, Russia); E. Nikitina (OOO Siemens, Moscow, Russia); A. Ettinger (Siemens AG, Erlangen, Germany)	

2.16	Load Flow Calculation of a Low Voltage Transformer using Satellitebased Irradiance Data	468
	H. Ruf (Ulm University of Applied Science, Germany); M. Schroedter-Homscheidt (German Aerospace Center – DLR, Germany); H. G. Beyer (University of Agder, Grimstad, Norway); G. Heilscher (Ulm University of Applied Science, Germany)	
2.17	Real time calculation of virtual meter points for simultaneous multiple use of PV storage systems	476
	F. Soyck (Technical University of Braunschweig, Germany); F. Schilling, M. Schmidt (Physikalisch Technische Bundesanstalt, Braunschweig, Germany); B. Engel (Technical University of Braunschweig, Germany)	
2.18	Operating a Multitasking Stationary Battery Storage System for Providing Secondary Control Reserve on Low-Voltage Level	483
	A. Zeh, M. Müller, H. Hesse, A. Jossen, R. Witzmann (Technical University Munich, Germany)	
2.19	Grid integration of market-oriented PV storage systems	491
	J. von Appen, (Fraunhofer IWES, Kassel, Germany); M. Braun (University of Kassel & Fraunhofer IWES, Kassel, Germany)	
2.20	Materials, Devices and Components for Flexible Electrical Networks of the Future	499
	N. Soltau, M. Kaymak, S. Cui, R. W. De Doncker (RWTH Aachen University, Germany)	
2.21	Bipolar High Power Semiconductors for efficient HVDC Energy Transmission in Super Grids	507
	M. Schenk, J. Przybilla, U. Kellner-Werdehausen, R. Barthelmess (Infineon Technologies Bipolar GmbH & Co. KG, Warstein, Germany); J. Dorn, G. Sachs, M. Uder, S. Völkel (Siemens AG, Erlangen, Germany)	
2.22	Compact Systems for High Voltage Direct Current Transmission	515
	M. Tenzer, H. Koch D. Imamovic (Siemens AG Energy Management, Erlangen, Germany)	
3	Reference Projects	
3.1	The project “EiChe” Wetrtingen: storage as an alternative to grid reinforcements – experiences, benefits and challenges from a DSO point of view	521
	S. Nykamp, T. Rott, N. Dettke, S. Küppers (Westnetz GmbH, Dortmund, Germany)	
3.2	EMiLippe – Business E-Mobility in the Rural Region of Ostwestfalen-Lippe based on Renewable Energy	527
	F. Pethig, S. Schriegel (Fraunhofer IOSB-INA Application Center Industrial Automation, Lemgo, Germany); O. Givehchi (Ostwestfalen-Lippe University of Applied Sciences, Lemgo, Germany); J. Jasperneite (Ostwestfalen-Lippe University of Applied Sciences & Fraunhofer IOSB-INA, Germany); S. Witte (University of Applied Sciences, Lemgo, Germany)	
3.3	Providing Control Reserve with PV Systems – Goals and Results of the Research Project PV-Regel	534
	D. Premm (SMA Solar Technology AG, Niestetal, Germany); B. Osterkamp, J. Seidel (Technical University of Braunschweig, Germany); S. Poehling (GEWI AG, Hannover, Germany); B. Engel (SMA Solar Technology AG, Niestetal & Technical University of Braunschweig, Germany); R. Thiel, G. Engelhard (SMA Solar Technology AG, Niestetal, Germany)	

3.4	Guidelines for the Integration of Voltage Control Applications	541
	H. Rui, S. Lang, H. Kreten, W. Wellßow (Technical University of Kaiserslautern, Germany); P. Hauffe, (Pfalzwerke AG, Ludwigshafen, Germany); K. Zimmer, C. Wendel, H. Geiß (Pfalzwerke Netz AG, Ludwigshafen, Germany)	
3.5	Medium-Voltage Dc Research Grid Aachen	549
	M. Stieneker, J. Butz, S. Rabiee, H. Stagge, R. W. De Doncker (RWTH Aachen University, Germany)	
3.6	Flexible Electric Networks of the Future: Project on Control and Automation in MVDC grids	556
	A. Korompili, A. Sadu, F. Ponci, A. Monti (RWTH Aachen University, Germany)	
3.7	Smart Power Hamburg: A virtual power plant for Hamburg	564
	P. Vuthi, P. Lorenzen, H. Schäfers (Hochschule für Angewandte Wissenschaften Hamburg, Germany); S. Raths, S. Krengel, (RWTH Aachen University, Germany); J. Sudeikat, M. Thomsen (HAMBURG ENERGIE GmbH, Hamburg, Germany)	
3.8	Roadmap for Smart Grids: Four Steps to an intelligent electrical distribution grid .	572
	D. Heuberger (EWE NETZ GmbH, Oldenburg, Germany)	
4	Markets & Regulatory Environment	
4.1	Flexibility Procurement for EV Charging Coordination	578
	A. Kießling (Energy Design & Management Consulting, Leimen, Germany); D. Dauer, S. Gottwalt (FZI – Forschungszentrum Informatik, Karlsruhe, Germany); C. Schäfer (MVV Energie AG, Mannheim, Germany), C. Weinhardt (Karlsruher Institut für Technologie – KIT, Germany)	
4.2	National regulation and standards development for Russian power system operation and control	585
	N. Shulginov, Y. Kucherov, Y. Fedorov (System Operator of the United Power System, Moscow, Russia)	
4.3	A highly transparent method of assessing the contribution of incentives to meet various technical challenges in distributed energy systems	590
	V. Spielmann (Technical University of Clausthal, Germany); C. Bettinger (Leuphana Uni- versity Lüneburg, Germany); K. Skau (Neubrandenburg University of Applied Sciences, Germany); H.-P. Beck (Technical University of Clausthal & Energy Research Centre of Niedersachsen, Germany); C. Fuchs (Neubrandenburg University of Applied Sciences, Germany)	
4.4	Influence of 15-minute contracts on frequency deviations and on the demand for balancing energy	598
	S. Remppis, F. Gutekunst (University of Stuttgart, Germany); T. Weißbach, M. Maurer (Transnet BW GmbH, Stuttgart, Germany)	
4.5	Comparative analysis of European Grid Codes and compliance standards for distributed power generation plants with respect to future requirements of ENTSO-E and CENELEC	605
	F. Kalverkamp, B. Schowe (FGH GmbH, Aachen, Germany); T.-D. Nguyen, T. Mertens (RWTH Aachen University, Germany); M. Meuser (FGH Zertifizierungsgesellschaft mbH, Aachen, Germany)	

4.6 Acceptance of the Energiewende – How to involve people in transforming the energy system	611
T. Oberfell, S. Gölz (Fraunhofer Institute of Solar Energy Systems ISE, Freiburg, Germany)	
4.7 A systematic survey of business models for smart micro-grids under current legal and incentive conditions	616
C. Bettinger, L. Holstenkamp (Leuphana University of Lüneburg, Germany)
